

Microneedling Client Consent/Medical Form

Client Details

Name: _____ Date of Birth: _____

Email address: _____ Telephone No.: _____

This form is designed to give information needed to make an informed choice of whether to undergo Microneedling.

If you have any questions, please don't hesitate to ask.

I understand that the procedure can result in an appearance enhancement and is typically used for skin rejuvenation and scar repair and that the treatment uses Microneedling medical device that creates controlled micro-surgical needle punctures of the skin surface. I also understand that I may require a series of Microneedling treatments, normally with at least 6 weeks between procedures, to achieve the maximum cosmetic result.

I acknowledge that no written or implied verbal guarantee, warranty, or assurance has been made to me regarding the outcome of the procedure.

I understand the following:

That immediately after the Microneedling procedure the skin will be red, resembling moderate sunburn, as the skin naturally heals the redness will resolve.

The skin may remain red for three or four days after the Microneedling treatment, although it is usual for it to subside within two days and many people are able to return to their normal activities the same or next day.

It is recommended that the use of soaps on the treated skin area is restricted until the redness subsides and where possible warm/tepid water and/or gentle skin cleansers are used for cleansing.

There is a small risk of infection of the treated skin area after the Microneedling procedure although this is not expected to occur due to the sterility of the Micro needling medical device and the fact that the epidermis of the skin is not removed as a result of the procedure.

The Microneedling procedure can cause areas of bruising although this would not normally be expected to occur, the eye contour being most at risk.

Any bruising will be temporary. There is a small risk that hyper-pigmentation of the skin can occur after the procedure, although this is not normally expected as the epidermis of the skin is not removed as a result of the procedure.

Failure to follow the sun expose and sun protection advice detailed below can increase this risk.

Please ensure you understand the potential complications and personal requirements of the Microneedling procedure over the page.

Microneedling Patient Medical Information

1. Are you allergic to local anaesthetics, do you have a history of anaphylactic shock (severe allergic reactions)? Y/N
2. Do you consent to the use of a local anaesthetic? Y/N
3. Do you suffer from known allergies? Y/N
4. Have you taken oral retinoids (Roaccutane) in the past 12 months? Y/N
